

(Knowledge for Development)

KIBABII UNIVERSITY

UNIVERSITY EXAMINATIONS

2020/2021 ACADEMIC YEAR

THIRD YEAR FIRST SEMESTER

MAIN EXAMINATION

FOR THE DEGREE OF BACHELOR OF EDUCATION AND

BACHELOR OF SCIENCE

COURSE CODE:

MAT 321/MAA 311

COURSE TITLE:

ODE I

DATE:

20/07/2021

TIME: 2 PM -4 PM

INSTRUCTIONS TO CANDIDATES

Answer Question One and Any other TWO Questions

TIME: 2 Hours

QUESTION ONE (30 MARKS)

State the order and degree of the following differential equations

i)
$$x \left(\frac{dy}{dx}\right)^2 - 4y^3 = e^{2x}$$

ii)
$$y^{III} + 3(y^{II})^3 = 5y$$

b) Prove that it is homogeneous and solve the differential equation

Solve the linear fractional differential equation

 $(3x^2 - v^2)dx + (xy - x^3y^{-1})dy = 0$

$$(2x + y + 6)dx = -(x - 2y - 2)dy$$

(7 mks)

(6 mks)

Solve the non-homogeneous differential equation

$$2\frac{d^2y}{dx^2} + 3\frac{dy}{dx} + y = 3\sin x$$

(6 mks)

(2 mks)

e) A car engine temperature by the time it is shut off is $180^{\circ}C$. The surrounding air temperature is $35^{\circ}C$. After 15 seconds have elapsed, the engine temperature is $150^{\circ}C$.

How long will it take the engine temperature to cool to $50^{\circ}C$ (i) (5 mks)

(ii) Find the engine temperature after 20 seconds

QUESTION TWO [20 MARKS]

(a) Obtain the differential equation having a solution as

$$y = Ae^{-2x} - Be^{3x} + C$$

(7 mks)

(i) $2vdx + x^2dv = 0, v(0) = -2$

(5 mks) (8 mks)

(ii) $(2xy + 3)dx + (x^2 - 1)dy = 0$

QUESTION THREE [20 MARKS]

(a) The sum of Kshs 2500 is invested at a rate of 6% per annum compounded continuously. (4 mks) What will be the amount after 6 years?

(b) Using the integrating factor solve the differential equation (8 mks) $(x^2y - x)dy + (y + 2x^2)dx = 0$

(c) Solve the following Bernoulli's equation $x^2 \frac{dy}{dx} - 2xy = 3y^4; y(1) = 1$

QUESTION FOUR [20 MARKS] (a) Verify that the functions $y_1 = x^2 + 2x + 2$ and $y_2 = e^x$ are linearly independent

solutions of the differential equation $x \frac{d^2y}{dx^2} - (2+x) \frac{dy}{dx} + 2y = 0$

(b) Solve the differential equation $x^2 dy + (y^2 - xy) dx = 0$

 $2v^{II} - 4v^{I} - 6v = 3e^{2x}$

OUESTION FIVE [20 MARKS]

(a) Solve the differential equation

 $\frac{d^3y}{dx^3} + 2\frac{d^2y}{dx^2} - 5\frac{dy}{dx} - 6y = 0$

(b) Solve the equation by method of variation of parameter

 $y^{II} + 4y^I + 4y = x^2 e^{-2x}$ (c) Test for exactness and solve the differential equation

 $(6y^2 - x^2 + 3)dy + (3x^2 - 2xy + 2)dx = 0$

(c) Use the method of undetermined coefficients to solve

(7 mks) (5 mks)

(6 mks)

(7 mks)

(7 mks)

(8 mks)

(8 mks)
